

## **ABSTRACT**

A method for installing networked attached storage. The networked attached storage is connected to a network with a plurality of storage. In the  
5 method, a first and a second storage carriers are connected to a first and second storage devices respectively, and a system medium built-in operating system is set in a remote server of the network. Afterward, the operating system is loaded to the first storage carrier, and then the operating system is mirrored to the second storage carrier. Finally, the operating system is mirrored to the third and  
10 forth storage devices for installing the operating system with the network on the hard disk-free networked attached storage (NAS).
